9. Draft, review and approve documents
10. Export and share
11. Correspondence, uploads and knowledge base
12. Security and privacy
13. Tips and troubleshooting

1. Welcome to Worker

Worker is a secure, web-based administrative assistant. You record a meeting or dictate, and Worker transcribes it, drafts the document you need (minutes, memo, letter, report, brief, speech and more), and keeps a complete record of who wrote, reviewed and approved it. People stay in charge: Worker drafts, you decide.

Who Worker is for

Any organisation that produces official documents: government offices, county and municipal administrations, NGOs, schools, boards, committees, companies and individual professionals such as executive assistants and board secretaries. Worker is available across 205 territories and works in any modern web browser.

What is new in this edition

- **Territory and working language** are set at sign-up, so documents follow the conventions of your territory and are written in your working language.
- **Automatic transcription:** recordings are transcribed in the background as soon as they are uploaded. No button to press.
- **Meeting language per session**, with transcription in 72 languages.
- **Generate as:** turn any session into minutes, a memo, letter, report, brief, circular, speech and more, with an optional instruction.
- **PDF export** alongside Word, PowerPoint and Excel.
- **14-day free trial**, with clear notices before and after it ends.
- **Clearer messages:** when something cannot be done, Worker now tells you exactly why.

2. Create your account

Sign up with email

1. Go to **worker.eshcloud.com** and choose **Create account**.
2. Enter your **full name**, **email** and a **password** (at least 8 characters), then confirm the password.
3. Choose your **territory**. Type in the search box to find it quickly; you can search by the local name, the English name or the two-letter code (for example "Deutsch", "Germany" or "DE"). If your browser settings name a territory, Worker pre-selects it for you.
4. Check your **working language**. It follows your territory automatically, and you can change it to any of the 72 supported languages.
5. Select **Create account**. Worker emails you a **6-digit code**; enter it to verify your address.

Territory, not country. Worker uses the word "territory" throughout, and shows each territory in its own language, for example Deutschland (Germany), 台灣 (Taiwan) or Suisse / Schweiz / Svizzera.

Sign up with EcoID

If you already have an EcoID, choose the EcoID option on the sign-in page. After EcoID confirms who you are, enter your name, an optional workspace name, your territory and your working language. Your email address is taken from EcoID and is already verified.

Signing in

1. Enter your email and password.
2. Worker emails a **fresh one-time code** every time you sign in. Enter it to finish.
3. Forgot your password? Choose **Forgot password?**, enter the emailed code and set a new password. Codes expire after ten minutes.

3. Your free trial and plans

Every new workspace starts with a **14-day free trial** with full access. You can choose a plan at any time from **Subscription** in the admin menu.

Plan	Monthly price	Pay with
Starter	USD 10 · KES 1,300	PayPal (USD) or M-Pesa (KES)
Professional	USD 20 · KES 2,600	PayPal (USD) or M-Pesa (KES)
Premium	USD 50 · KES 6,500	PayPal (USD) or M-Pesa (KES)

What happens when a trial or subscription ends

Stage	What you can do	What you see
Last 3 days of the trial	Everything	A notice counting down the days left
First 14 days after it ends (grace)	Everything	An amber notice with the days of full access left
After the grace period	View and export your documents, sign in, pay, contact support	A red notice: the workspace is read-only

Nothing is ever deleted. Choosing a plan restores full access within a minute. Your sessions, recordings and documents are always kept.

4. Set up your organisation

Administrators open **Organisation** from the admin menu to make Worker truly yours.

1. Enter your **organisation name**.
2. Confirm your **territory** and **working language**. Worker writes every AI draft in your working language and follows the formal conventions for official documents in your territory.

3. Add up to **three letterhead lines**, for example your organisation, department and address. They appear at the top of exported Word and PDF documents and in the document preview.
4. Upload your **logo or crest** and an **e-signature** image (PNG or JPG).
5. Select **Save**.

No letterhead set? Documents are exported without a letterhead. Worker never adds another organisation's name or crest.

Invite your team

Role	Can do
Administrator	Everything in the workspace: approve and finalise documents, manage branding, templates, staff, subscription and the audit trail
Officer	Create sessions, record and transcribe, draft and edit documents, draft and send correspondence
Viewer	Read-only access to permitted material

5. Sessions: capture a meeting

A **session** is the case file for one meeting, interview, briefing, dictation or field report. Everything you capture lives inside it.

Create a session

1. Open **Sessions** and fill in the title, type, classification, department, date and location.
2. Choose the **meeting language**, or leave it on **Organisation default**.
3. Select **Create**, then open the session.

Record or upload audio

- **Record in the browser:** allow microphone access, select record, and stop when finished.
- **Upload a file:** add an audio file you already have, for example from a phone or voice recorder (up to 200 MB).
- A session can hold several clips; each one has its own player and transcript.

Automatic transcription

As soon as a recording is saved, Worker queues it for transcription on its own servers; your audio is not sent to outside services for transcription. The page updates by itself while work is in progress.

Status	Meaning
Pending	Waiting in the queue; transcription starts shortly
Transcribing	Being transcribed now
Transcribed	Ready to review

Status	Meaning
Failed	Something went wrong; the reason is shown and you can select Transcribe to retry

How long does it take? Roughly as long as the recording itself, sometimes less. Recordings are processed one at a time, so a queue may form at busy moments.

6. Languages and transcription

Worker's interface, documents and transcription each have their own language setting:

- **Working language** (organisation setting): the language Worker writes documents in.
- **Meeting language** (per session): the language spoken in the recordings. You can change it from the session page at any time; it applies to recordings transcribed from then on.

Transcription support	Languages
Standard	21 languages, including English, French, Spanish, Portuguese, Arabic, Chinese, German, Russian and Japanese
Beta	46 languages, including Kiswahili, Amharic, Somali, Hindi, Urdu, Bengali and Vietnamese. Accuracy varies, so review carefully
Not available	Dhivehi, Greenlandic, Irish, Kyrgyz and Tetum. You can still draft documents in these languages

One language per recording. For best results, set the meeting language to the main language spoken. Recordings that switch between languages mid-sentence, such as English and Kiswahili, are not yet fully supported; review those transcripts carefully.

7. Review transcripts

1. Play each clip beside its transcript.
2. Select **Edit / verify** to correct names, figures and wording, then mark the transcript as **verified**.
3. Use the **In minutes** tick box to choose which clips feed your documents.

Good transcripts make great documents. A few minutes of review pays off in every document generated from the session.

8. Generate any document from a session

Once a session has a transcript, the **Generate a document from this session** panel appears.

1. Under **Generate as**, choose the document type: Minutes, Memo, Letter, Report, Policy brief, Briefing note, Concept note, Circular, Action matrix or Speech.

2. Optionally add an **instruction**, for example "Letter to the Permanent Secretary summarising decisions 2 and 3".
3. Select **Generate**. Worker drafts the document from the ticked transcripts, in order, and opens it for you.
 - **Minutes** capture attendance, discussion, decisions and a table of actions with owners and deadlines.
 - Worker uses only facts stated in the material. Anything missing is marked **[TO BE CONFIRMED]** for you to complete.
 - The **Generate minutes** button at the top of the session is a one-click shortcut for minutes.

9. Draft, review and approve documents

Other ways to start a document

- **Draft with AI:** choose a type and describe what you need in a short brief.
- **Start from a template:** built-in templates cover every common type, and administrators can save any document as a template for the team.
- **Report from a spreadsheet:** upload an Excel or CSV file; Worker computes key figures and drafts a narrative report with data tables. Clean sheets with a header row work best.

Review and approval

1. Edit the draft freely and check the **preview**, which shows your letterhead exactly as it will be exported.
2. **Submit** the document for review.
3. An administrator **approves** (or rejects with a comment) and then **finalises** it.
4. Every step is recorded with who did it and when.

10. Export and share

Format	Best for
Word (.docx)	Official documents and letters you may still edit
PDF	Circulating or printing final documents; the layout matches the Word export exactly
PowerPoint (.pptx)	Presenting a document as slides, with charts built from your figures
Excel (.xlsx)	The underlying tables and data

Every export carries your organisation's letterhead, logo and signature. Exports remain available even when a workspace is read-only.

11. Correspondence, uploads and knowledge base

Correspondence

- Tell Worker the purpose of a message and it drafts a clear, courteous reply or new message.
- **Nothing is ever sent automatically.** You review, edit and select Send yourself, and every send is logged.

Uploads, scans and the knowledge base

- Keep policies, circulars and precedents in one place. Upload Word, PDF, spreadsheet and text files, or paste text directly.
- Photograph a paper document or upload a scanned PDF; Worker reads the text with on-server OCR.

12. Security and privacy

- **One-time code on every sign-in**, even if a password is shared.
- **Your workspace is private:** other organisations can never see your sessions, documents or data.
- **Audio stays on Worker's servers** for transcription, and scans are read on the server.
- **Complete audit trail** of significant actions, without storing document contents in the log.
- **People approve and send.** Worker never sends anything on its own.

13. Tips and troubleshooting

Situation	What to do
A message says the workspace is read-only	Your trial or subscription has ended and the 14-day grace period is over. Choose a plan under Subscription; your documents can still be viewed and exported meanwhile.
"Transcription is not yet available for ..."	The session's meeting language is one of the five without transcription. Change the meeting language on the session page, then select Transcribe.
A recording shows Failed	Read the reason shown, fix it if needed (for example the meeting language), and select Transcribe to retry.
A transcript has many errors	Check the meeting language is correct, record closer to the speakers, and correct the transcript before generating documents.
Generate is not shown on a session	The session needs at least one transcribed recording with the In minutes box ticked.
Letterhead missing from exports	An administrator adds letterhead lines, logo and signature under Organisation.

Getting help
